About This Game

Someday any kingdom comes to an end. Most often this is due to wars, but what if it happens because of magic? It is a question of one kingdom, whose king was cursed by an evil shaman. All would be nothing, but our hero is the brother of that very king. What to do, save a brother or seek a shaman? **In this world, you choose what you do.**

Game process:

- 20+ locations;
- 10+ different kinds of enemies;
- 1 story and 2+ minor quests;

I got this game when it was on sale for \$0.99 on 02/22. I was enjoying it quite well until I came to a point where I needed to save. The menu has the save option, but when you restart the game the only options are "New Game" and "ShutDown" I was assuming something like a "Continue" would be in there for me to load the save game but it wasn't. I had to get a refund, but If I knew that was implemented or fixed in the game I wouldn't mind giving it a try again in the future if it goes on sale. That was a deal breaker, but other than that I don't have anything bad to say about the rest of the game. At the moment I can't recommend it, but if the "Continue" got implemented (because the menu when you press esc does have the save option and the save state slots you can choose) then maybe I'd change my rating (if I could) and possibly try it again.
