Serial Port - Hyperterminal vs. C#

Using Forums forums > Off-Topic Posts (Do Not Post Here)

Question

   

I am having trouble connecting to a USB/virtual serial port device using C# and Labview for what it's I am able to connect to it using hyperterminal. I downloaded PORTMON and am trying to understand is going on. I've basically compared the two results and have tried to google my way through it, after little luck.

Can anyone help? I think I've got most of the basic stuff interpreted. But, I'm having trouble understand what, replace, RL, RM, RC, RM, etc... actually mean. I anticipate if I can get my C# program to read hyperterminal program, I will be in good shape. But, as much as I love C#, I can't figure some of the reading here to interpret what, replace, RL, etc...)

Lines 1-29 are from the hyperterminal program and lines 30-41 are from the C# program.

Much obliged,
D.Norwood
